

As we were playing at the car track, Jack ran off to get a car that had rolled away and I looked up at the cars driving past the school. I watched a few cars go by and then a minute later another group go by. By the time 10 cars had passed I realised they made a pattern!

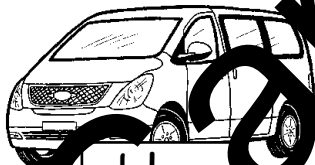

4. What might this pattern look like?

Once, our teacher, Mrs. Sander, had taken us out of school one day to collect some data on the colours of the cars that drove by. We had to create a tally for every red, blue, black and white car that we saw.

5. What might this tally look like?

red

blue

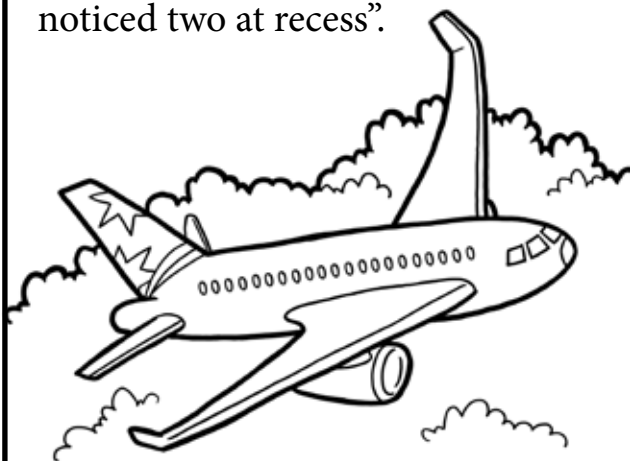

black

white

Jack came back and pointed out a plane flying over us. "That's the second one I have seen since we came out to play," he said. "And I noticed two at recess".

6. Can you work out how many planes might fly over the school in one day?
