Habitats

Geography

You will need:

- pencil
- sheet of paper/workbook

- Habitats are places where animals live. Habitats provide animals with things that they need. Choose an environment in your local area that provides a habitat for animals. Complete the questions in your workbook.
1. Write a paragraph describing this environment and the animals which live there.
 2. Give your thoughts on why we need to protect this environment.
 3. Make a list of ways to protect this environment, e.g. planting bird-attracting vegetation.

Marine Waste

Geography

You will need:

- pencil
- sheet of paper/workbook

Waste that is not correctly disposed of can end up in our oceans. This has damaging effects on our marine life as they can either accidentally ingest the debris or become entangled and unable to free themselves. Every year it is reported that marine creatures die and are put at risk from debris that has made its way into our oceans.

- Make a poster to increase awareness of the negative effects of waste in our oceans. Encourage people to manage waste properly to help prevent animals being harmed. Choose a marine creature to feature on your poster, e.g. sea turtle, pelican. You might like to write a poem or slogan to add to your poster.

*Our turtles are mad,
that our oceans are bad.
Don't dump your waste,
in the wrong place!*
